Common Questions in Chapter 15 and Their Answer Key Insights

Here are some typical questions from chapter 15 along with summarized insights based on answer keys:

Q1: What is the principle of segregation in genetics?

The answer key explains that the principle of segregation states that during gamete formation, the two alleles for a gene segregate independently so that each gamete carries only one allele for each gene. This principle was proposed by Gregor Mendel based on his experiments with pea plants.

Q2: How does natural selection lead to evolution?

The answer key clarifies that natural selection causes evolutionary change by favoring organisms with advantageous traits, which become more common in the population over generations. This process results in adaptation and can lead to the emergence of new species.

Q3: What are the major threats to biodiversity?

The answer key highlights threats such as habitat destruction, pollution, overexploitation, climate change, and invasive species. It emphasizes the importance of conservation efforts to preserve biodiversity.

Q4: Describe the pathway of nerve impulse transmission in the human nervous system.

The answer key details that nerve impulses are transmitted via electrical signals along neurons. When a stimulus triggers a nerve cell, an action potential is generated and travels along the axon to the synapse, where neurotransmitters facilitate communication with adjacent neurons.
